# Double row radial contact ball bearing

Steel

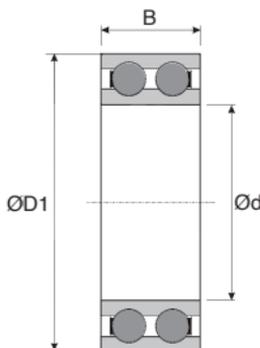

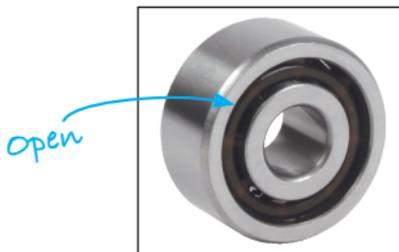

Q4

- Double row bearings are capable of handling axial loads in both directions as well as radial loads as they have a deep groove and can accept movement between the balls and raceway.
- Static and dynamic loads are radial loads
- Materials:  
Steel rings and balls  
Polyamide cage

## Advantage

- For the same external diameter and bore, a bearing with two rows of balls is capable of handling higher loads than a bearing with a single row of balls.
